Office Action Summary

Art Unit 3662

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. Claims 1-13 are rejected under 35 U.S.C. § 102(a), (b), or (e) as being anticipated by anyone of Kacyra et al, Kozah et al, or Ohishi et al.

All three references teach 3D laser range imaging that meet the broad requirements of these claims to produce dimensions of the imaged target.

3. Claim 7 is rejected under 35 U.S.C. § 112, first and second paragraphs, as the claimed invention is not described in such full, clear, concise and exact terms as to enable any person skilled in the art to make and use the same, and/or for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The description of what is intended and its support in the specification is nonenabling and vague. No structure has been presented to enable the features claimed to be discriminated among all the image points.

4. The specification is objected under 35 U.S.C. § 112, first paragraph as above in the preceding paragraph.

5. The drawings are objected under 37 CFR 1.83 in that every feature claimed must be shown as argued above.

6. Goodwin et al, Grimson et al, Landau, Marino, and Sullivan et al have been cited to show related 3D imaging.
